

WEBKON

— **DRIVEN BY QUALITY, DEFINED BY SERVICES**

• **CASTING • FABRICATION**

**MANUFACTURERS OF :
TRUCK AND TRAILER CHASSIS PARTS**

ABOUT US

DRIVEN BY QUALITY DEFINED BY SERVICE

WEBKON is founded in 2020 under his manufacturing unit Aggarwal Industries to provide & cater automotive parts with quality products

Aggarwal Industries based at Jalandhar, Punjab engaged in manufacturing of HCV – truck and trailer chassis parts under brand Webkon.

WEBKON use its strong platform of design and engineering capability and manufacturing process to further strengthen its position in automotive sector of India and neighboring countries.

We manufacture vast range of casting and fabricated machined components compatible with Indian trucks and trailers i.e TATA, LEYLAND, BHARATBENZ, EICHER, MAHINDRA etc

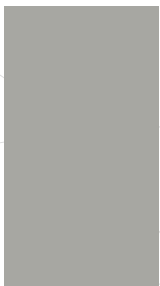

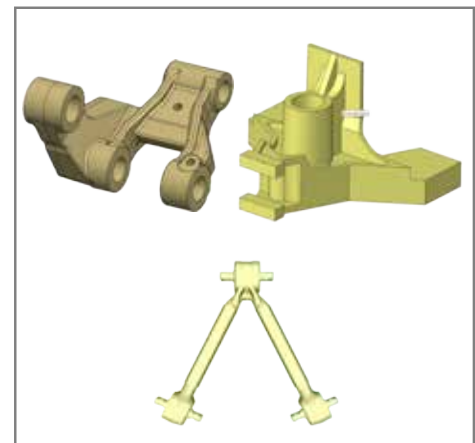

RESEARCH AND DEVELOPMENT:

There are some criteria which our company follows to be the leader of automotive sector

We have latest designing software AUTO-CAD in our faculty, we can develop any kind of product, our engineers develop patterns, jigs and fixtures according to design of product. Our engineers calculate all kind of PCD i.e holes, bore and height etc.

CASTING:

Metal casting is a process in which hot liquid metal is poured into a mold that contains our pattern cutout of the desired finished product we required. Our engineers use metallurgical testers to check quality of tensile strength, hardness, grain size, surface contamination. Our faculty has 300 kg electric furnace with capacity of 100 tons production per month with all process like short blasting, grinding, surface finish paint. Our engineer uses OEM material grade of casting i.e spheroidal graphite iron 500/7 with some copper elements to increase elasticity of material.

MACHINING:

We are having full manufacturing process where a desired shape or part is machined using the best machining centers like CNC ,VMC , HMC and some type of special lathe machines , drill machines , powder paint coating and we are having hydraulic press of 300 tons to bend metal sheet parts and crumping of rods.

QUALITY CHECK, PACKING & DISPATCH:

The QC process involves identifying standards to ensure they meet those benchmarks and removing any products that don't match our quality expectations. We use gages, micrometers, vernier caliper and height gage to maintain our quality standards.

Where all kinds of necessary checks and anti-rust oil applied on all products then it is properly covered in bubble wrap and placed in jute bags. All products come in a standard packing depending on size and weight of product.

Our policy is to fulfill our customer order within 5-7 working days from date of order placed. We have our local serviceable mini trucks for dispatches of your material to your recommended transports.

Thanking you and Wishing for Healthy Relation Onwards.
